ABOUT US

Rigel is one of the licensed brands of Ser Footwear, which was established in 1992 and operates in the military footwear and safety footwear sector. Ser Footwear has a production capacity of 100,000 pairs per month with 6 Desma injection molding machines, a factory with a size of 12.500 square meters.

Our products have certificates such as ISO 20345, ISO 9001, ISO 14001 and Turkish Accredited Analysis Report. All the products we produce are undergoing quality control tests in the testing laboratory in our factory.

As Rigel, it is our first priority to continue quality production at European standards in the field of military and outdoor and to carry our domestic success abroad.

We are moving forward with confident steps in our adventure in the sector with our products that provide maximum performance under all conditions and our customer-oriented working approach.

We believe that our production quality being at the European standards, having quality testing laboratory in our factory and the fact that we are producing Gore-Tex and Vibram licensed products, will help us to take a faster path on this journey.

TECHNOLOGY

Footwear equipped with the GORE-TEX DURATHERM membrane comes with a warm, waterproof and breathable lining.

A Vibram sole with a newly developed polymer mixture that produces good grip on snowy surfaces.

Double density polyurethane and rubber combination sole technology adapts to difficult conditions and provides good grip.

Rigel Double Density Rubber Sole Technology consists of a rubber midsole and outsole layer. The chemical bond between these layers is so strong that glue is not needed to hold them together. The rubber fuses with the upper as it is compressed under heat and pre-meanning it does not release to adhesive failure. Double Density Rubber is highly resistant to abrasion.

It provides optional protection to your feet against -10, -20 and -40 degrees in cold climates with the linings inside the Intesa boots.

Shoelaces holds the tongue in place and prevents slippage in the process.

The sole unit is tested for slip resistance on ceramic tile wetted with dilute soap solution and smooth steel with glycerol.
